Re: City Public Water Supply
FabraCare Cleaners Superfund Site

Dear Mr. Werner:

On behalf of the United States Environmental Protection Agency, Region IV (EPA), Roy F. Weston, Inc. (WESTON®) requests information from the Ft. Valley Utility Commission regarding the city water supply. It will be used as supporting documentation in a Hazard Ranking System (HRS) scoring package for the FabraCare Cleaners Superfund site in Ft. Valley, Georgia. WESTON is preparing the HRS package for EPA in accordance with the Comprehensive Environmental Response and Liability Act (CERCLA) or Superfund process. The information is required to properly evaluate the groundwater threat to the population served by the municipal water system as a result of contaminated drinking water supply wells.

On June 21, 1999, I spoke with Mr. Walter Lanter who provided me some useful information; however, the following additional information is respectfully requested:

1. Location of all municipal wells within a 4-mile radius of FabraCare Cleaners and the aquifer in which it is completed;
2. Number of persons served, including students and workers, or number of service connections;
3. Whether any well provides more than 40 percent of the city's water system;
4. Average annual pumpage or capacity for each well;
5. Delineation of areas served by the municipal system;
6. Analytical data for city wells 1 and 2.

The information is necessary to support statements and assumptions made in the scoring package. It should also correspond roughly to the date(s) that the wells were found to be contaminated. Please provide as complete an answer as possible. Your cooperation is greatly

Mr. Ken Werner
